May 5, 2022

The Honorable Jared Polis, Governor of Colorado  
State Capitol Building  
200 E. Colfax Ave., Rm. 136  
Denver, CO 80203

Dear Governor Polis,

On behalf of the 1,125 members of the Colorado Independent Automobile Dealers Association (CIADA), we are writing to urge you to take immediate action to allow amendments to Senate Bill 22-009 which will allow consumers to get their vehicles needing catalytic converters back on the road in a quicker and more affordable manner that is better for Colorado air quality.

The theft of catalytic converters is a well-known issue in Colorado. What isn't as well known is the tremendous consumer impact of catalytic converter theft and the lack of access to CARB-certified catalytic converters is having on Coloradans. New CARB standards and unforeseeable supply chain issues have created a major, and sometimes impossible challenge for consumers to get their cars back on the road in a timely manner that is also environmentally friendly. Without being able to get the new catalytic converters that meet CARB standards their vehicles need, businesses are being negatively impacted and citizens can't get to work, get their kids to school, or drive to appointments or the grocery store.

We need a timely solution to get more catalytic converters into the state, that still meet emissions requirements, and can be installed. Help us implement the use of non-CARB aftermarket catalytic converters for people and businesses who have inoperable vehicles as they wait for CARB certified catalytic converters to arrive (which is impossible or takes multiple months to arrive), many of whom are the victims of catalytic converter theft.

Passage of SB 22-009 will address these issues:

- **Rise in catalytic converter thefts in Colorado.** Catalytic converter theft has risen 5,100% in Colorado in recent years. That number doesn't take into consideration that many people do not report catalytic converter theft. In the same time frame, the supply of replacement catalytic converters has dramatically decreased, and the cost of the converters you can find has increased fourfold. Think about that impact on your constituents when theft is up 5,100% and the cost to repair has quadrupled.
- **Coloradans are left for months with inoperable vehicles while they await catalytic converter repairs.** The availability of CARB-certified after-market catalytic converters is almost non-existent due to supply chain issues with no remedy in sight.
- **Catalytic converter repair costs have quadrupled.** The cost of CARB-certified after-market catalytic converters is 800% more expensive than non-CARB-certified catalytic converters. The new ones are more expensive because they must meet certain requirements and contain more precious metals, yet the non-CARB certified catalytic converters will meet the emissions standards to keep cars emitting clean air on our roads. They are currently being used on vehicles in Colorado and pass the required yearly emission test administered by clean air Colorado. The repair costs of a catalytic converter are high, compared to the price of the converter itself. The price for selling a non-CARB-certified catalytic converter is no more than \$300 and is readily available, but a typical CARB-certified catalytic converter replacement starts at around \$2,500.

- **Older cars are being totaled because of the price of these repairs.** A 14-year-old car with 160,000 miles on it, would be totaled by the cost to repair a converter despite the car having much longer potential.
- **Coloradans are going out of state to order non-compliant catalytic converters.** Currently, consumers who cannot find a replacement catalytic converter are driving to neighboring states without CARB laws to have them installed by a mechanic or similar technician without the same testing requirements as we have here in Colorado. Consumers are finding parts online, on places like eBay Auto, or on Craigslist, purchasing them with no history of the part or certification documents, and having their mechanic install them—there is no trace or proof that these meet the Colorado standards.
- **Colorado air quality is being negatively impacted by people driving without catalytic converters or converters that are improperly installed.** Due to the issues mentioned above, in many cases, businesses and individuals are choosing to simply drive without a catalytic converter or a converter that isn't properly installed. Not only is this bad for Colorado air quality, but it also emits greenhouse gas which we are trying to avoid by requiring catalytic converters to be CARB certified. We support clean air and want to follow these emissions rules when installing catalytic converters.

SB22-009 will provide a temporary allowance to have catalytic converters that do not meet CARB standards but are still emissions tested installed in vehicles in order to get these vehicles that have had a catalytic converter stolen, or simply need a replacement to get back on the road—but in a way that is safe, and environmentally friendly. Let us keep our air clean and get the cars back on the road.

Thank you for considering our views on this urgent matter.

David Cardella  
CIADA CEO
